Performance Overview

- **Organic Traffic Acceleration:** Increased average weekly website traffic acquisition by **36.4%** (scaling from 215+ to 295+ weekly sessions).
- **Lead Generation Lift:** Scaled high-intent conversions from a baseline of **0 WhatsApp click-throughs** on legacy content to a consistent double-digit flow (up to **31 actions per post**) on newly optimized pieces.
- **Engagement Mastery:** Achieved an elite average read-time benchmark of **1m 20s+** on complex B2B technical copy, drastically reducing bounce risks.

Before vs after: *Baseline before my tenure (legacy content, Oct 2023 – Sep 2025) was about* **215 weekly sessions** *sitewide and* **0 WhatsApp click-throughs** *on legacy articles. The results above and the articles below are from Oct 2025 onward. Figures were recorded during my employment; I no longer have analytics access.*

AI Search Visibility: Supporting Content for Cited Landing Pages

My articles are not the pages cited in these AI Overviews. The cited pages are MC Crenergy's product landing pages: DATANORY SFA (sales force automation) and DATANORY DMS (distribution management). My role was writing the supporting content around them.

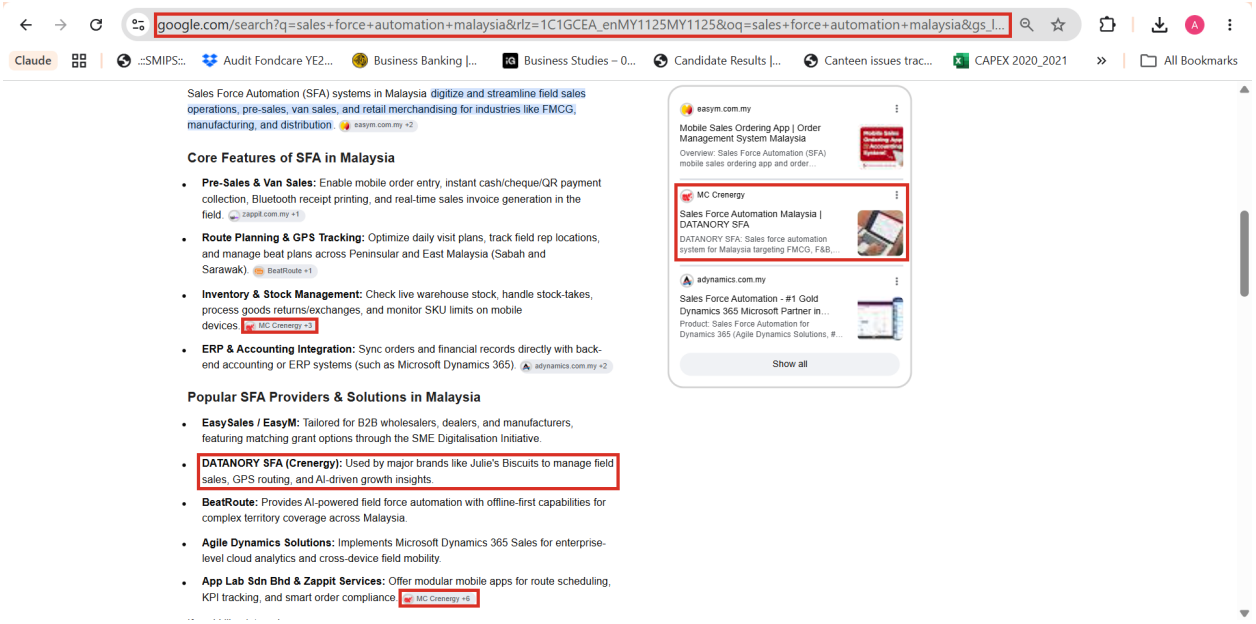

How my articles support these landing pages

- **Same target keywords.** Almost all of my high-performing blogs and articles were written around the keywords these landing pages compete for, such as sales force automation, sales management system and distribution management system in Malaysia. Keywords were placed in the H1, H2s and first 50 words.
- **Repeated internal links to the landing pages.** Every article of mine links to the relevant high-ranking and AI-visible product module or landing page several times, using keyword-matched anchor text.
- **Informational keyword coverage.** The articles answer the informational questions buyers ask before they look at a product, e.g. "What is the Route Planning Module?", "What sales problems does it solve?" and "How do sales managers reassign routes when a salesman becomes unavailable?". The landing pages themselves focus on the product and the commercial keywords.
- **In-depth, parsable content.** Question-led H2s, step-by-step sections and real field scenarios (around 1,400 words in the Route Planning article) give search engines and AI systems detailed, well-structured information on each module.
- **Topical depth.** Together the articles form a topic cluster around sales force automation and distribution management, which signals that the site covers these subjects in depth and passes internal link value to the landing pages.

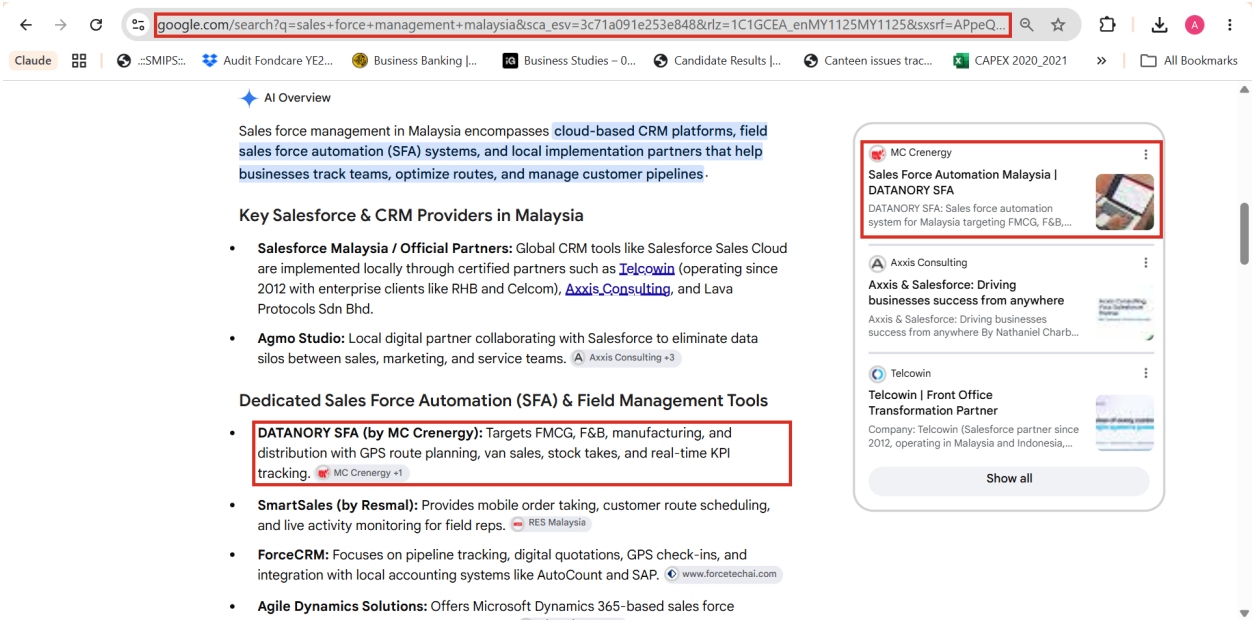

Where the supported landing pages appear today

For the non-branded Google searches below (Malaysia, captured Oct 2026), the landing pages my articles link to are cited in the AI Overview. The DATANORY SFA page is cited for "sales force automation malaysia" and "sales force management malaysia", and the DATANORY DMS page for "distribution management system malaysia". Both pages are also the first organic result where shown.

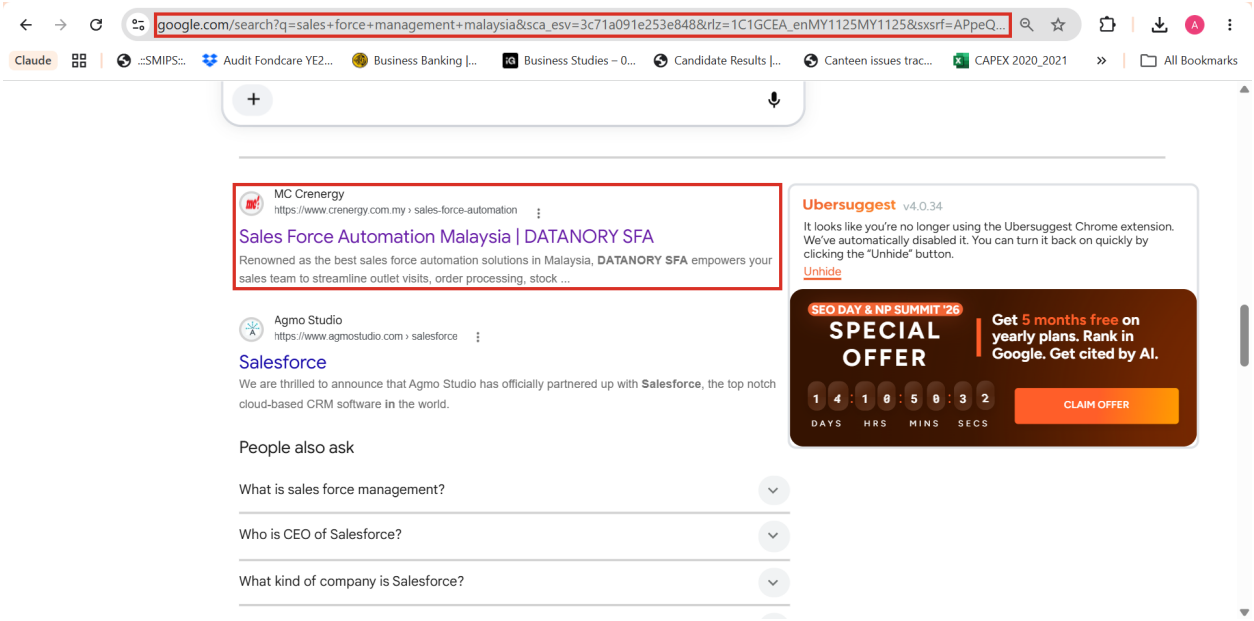

“sales force automation malaysia”: the AI Overview cites the DATANORY SFA landing page and names DATANORY SFA among popular providers.

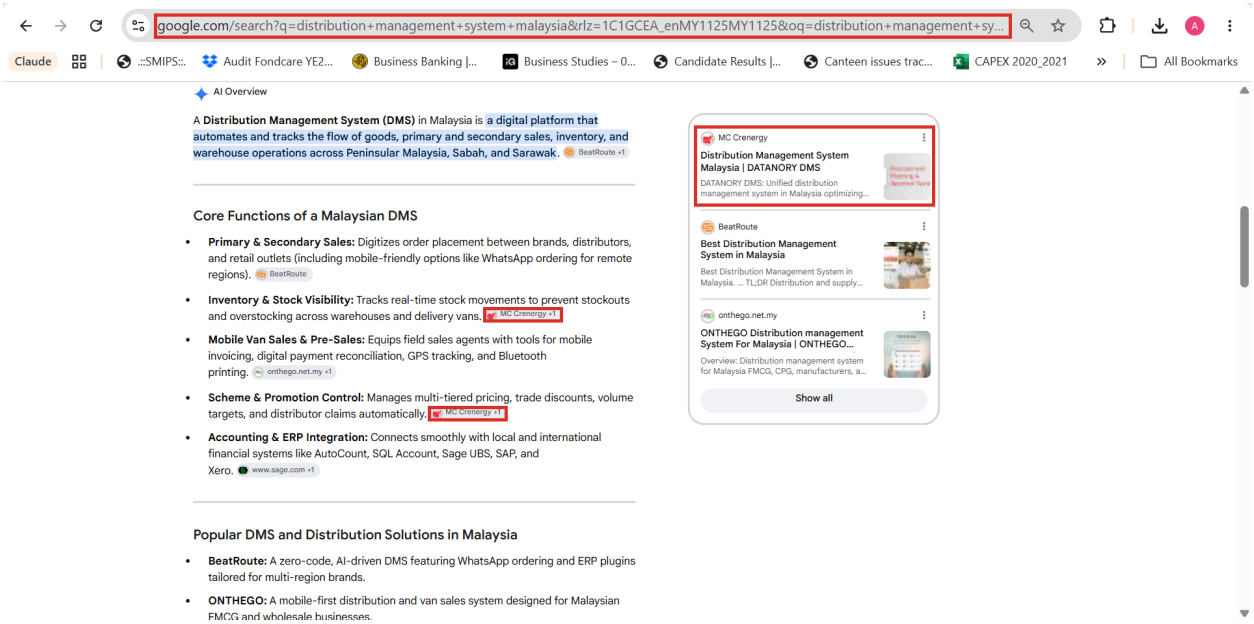

“sales force management malaysia”: the AI Overview cites the DATANORY SFA landing page as its first source.

“sales force management malaysia”: the DATANORY SFA landing page is the first organic result.

“distribution management system malaysia”: the AI Overview cites the DATANORY DMS landing page.

“distribution management system malaysia”: the DATANORY DMS landing page is the first organic result.
